

HUMIDITY ABSORBER

Dri-It® humidity absorbers help prevent moisture damage on consumer goods, such as homes, RVs, boats, storage units and other applications requiring moisture control. By controlling the relative humidity in an enclosed area, Dri-It reduces dew point temperature, or the temperature at which moisture turns into condensation, keeping valuables like clothing, furniture, boats, RVs, automobiles and carpeting safe and dry.

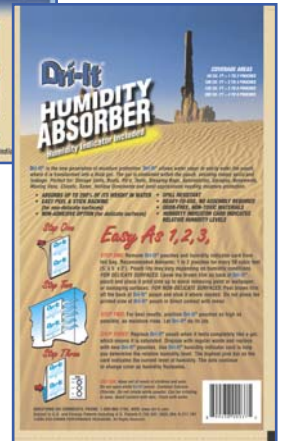

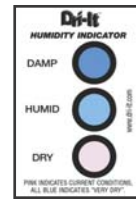

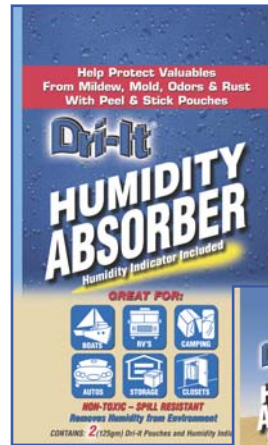

Dri-It's patented design includes numerous features that can help you protect your valuables from the damaging effects of moisture, including:

Feature:

- ✓ Capability to absorb up to 300 percent of its weight in moisture.
- ✓ Self-contained packaging that allows Dri-It to absorb moisture directly through its micro-porous film.
- ✓ Ready-to-use design.
- ✓ Adhesive backing.
- ✓ Accurate, easy-to-read humidity indicator card.
- ✓ FDA compliant materials that are completely safe and non-toxic.

Benefit:

- ✓ Provides a cost-effective solution for maximum moisture protection.
- ✓ Eliminates accidental spills, which could potentially damage goods.
- ✓ Eliminates the need for time-consuming assembly, confusing instructions or the handling of loose chemicals.
- ✓ Can be placed on uneven or hard-to-reach surfaces for maximum moisture protection.
- ✓ Determines humidity conditions and indicates when it might be time to replace Dri-It.
- ✓ Allows for convenient, everyday use and easy disposal with regular waste.
